Fondouk

Module documentation — AI Agent Ready (UCP · MCP)

Fondouk makes a PrestaShop store discoverable and queryable by AI agents — ChatGPT, Gemini, Claude and any client that speaks the open **UCP** (Universal Commerce Protocol) and **MCP** standards. It is **read-only** and needs **zero configuration**: what an anonymous visitor already sees on your storefront becomes readable by agents — real-time catalog, prices and stock.

Read-only | Zero config | Public only | UCP 2026-04-08

Requirements

- PrestaShop **8.2** or **9.1**.
- **Friendly URLs** (SEO-friendly URLs) enabled.
- **HTTPS** on the shop domain.

Installation

- Back office → **Modules** → **Module Manager** → **Upload a module**, then drop `fondouk.zip`.
- Install and enable. There is **no settings screen**: the module's single page shows an **environment diagnostic** (HTTPS, friendly URLs, physical `.well-known` conflict) and the agent URLs.
- The discovery manifest is immediately live at `https://your-shop/.well-known/ucp`.

What the module exposes

- A **UCP discovery manifest** at `/.well-known/ucp`.
- The **Catalog** capability (search / lookup / product) over **REST** and **MCP**.
- Everything is generated by **introspection** of the store — catalog, variants, stock, public prices, languages, currencies. No feed to maintain.

Data & privacy

The module is **read-only and public-only**. Agents see exactly what an anonymous visitor sees on the storefront. Prices are computed in an **anonymous-visitor context**, so **customer data, B2B/group prices, carts, checkout and orders are never exposed**.

Verify it works

```
# 1. Read the manifest
curl -s https://your-shop/.well-known/ucp

# 2. Search the catalog (endpoint read from the manifest)
curl -s -X POST https://your-shop/fondouk/ucp/catalog/search \
```

```
  -H 'Content-Type: application/json' \
  -d '{"query":"t-shirt","pagination":{"limit":2}}'
```

Performance & hardening

Response caching (invalidated by product hooks) and token-bucket rate limiting (60 requests/min, burst 120) with `Retry-After` keep the shop responsive under agent crawl on PrestaShop 8 and 9.

Uninstall

Uninstalling removes the module and its data cleanly; the agent endpoints stop responding immediately.

Support & security

Questions and issues: **github.com/fondouk-dev/fondouk**. Please report security vulnerabilities **privately** to **security@fondouk.dev** — do not open a public issue.
